Summary

Full Stack Developer with 1 year of production experience building and shipping real-world applications across web and mobile. Delivered features end-to-end at a product startup from backend Rails pipelines and role-based access systems to React Native mobile releases. Comfortable owning problems independently, responding to production issues, and working across the full stack to get things done.

Professional Experience

Full Stack Developer, *Invi* 04/2025 – 04/2026
Pune, Hyderabad

- Led end-to-end ownership of the OMS mobile application for ~5 months, independently managing feature development, QA coordination, and production releases to ensure zero regression across platform updates.
- Built a desktop automation tool to streamline claims processing across Amazon, Flipkart, and Meesho portals eliminating repetitive manual workflows , reducing the support team's operational burden by nearly **70%** .
- Engineered a scheduled data pipeline that automatically syncs operational data from the internal panel to Zoho CRM on a daily basis replacing manual entry, improving data freshness, and freeing up support team bandwidth by **40-50%**.
- Designed and built a full-stack sub-user management system for the OMS implementing role-based access control across both backend logic and frontend UI enabling secure, multi-user operations and giving admins granular control over team permissions.
- Extended the auto label generation system with a user-configurable scheduler built on Rails with Delayed Jobs , allowing users to define specific days and times for bulk label generation ahead of warehouse arrivals, with support for skipping runs on designated dates. Engineered edge case handling to guarantee no missed or duplicate label runs across batch sizes ranging from **100 to 10,000 labels**.
- Acted as a first-line technical responder to production issues escalated by the support team diagnosing and deploying real-time fixes, reducing resolution time and preventing issues from compounding in live operations.
- Contributed full-stack (web + React Native) to a bespoke inventory management product for a fabric manufacturing client replacing a manual Excel-based workflow with a real-time system that tracked raw material stock, monitored production batches through the roll-to-garment manufacturing pipeline, and gave a nearly **30 person team** instant visibility into expected goods output all from a single interface.

Education

B.Tech in Computer Science, *Universal College of Engineering* 2020 – 2024

HSC in Science, *Shri T.P.Bhatia* 2018 – 2020

Skills

Programming Languages
- JavaScript
- Ruby

Tools and Technologies
- GitHub
- Vercel
- Visual Studio Code

Databases
- MySQL
- MongoDB
- Postgres

Dev Tools & AI Assistants
- Cursor
- Claude code
- Github co-pilot

Frameworks and Libraries
- React Native
- React.js
- Node.js
- Express
- Rails
- Electron.js
